

iSecurity

System i Security Solutions

End-to-End Security for IBM System i

iSecurity

SEA - Software Engineering of America provides the iSecurity solution which is the most encompassing, insightful and user-friendly security solution for the System i market. The product's well thought-out and developed protective mechanisms are uniquely engineered for the System i server environment, greatly minimizing any interference with the server's on-going production needs. All products are defined, developed and supported by System i experts which provide them with critical, intimate knowledge of the OS and its related technologies. iSecurity's development has been enhanced by the capture and integration of customers real world requirements during the design phase.

iSecurity provides users with solutions meeting SOX (Sarbanes Oxley), HIPAA, GLBA and similar recognized standards and requirements. With iSecurity, SEA defines the standard for System i security!

PRODUCT SUITES

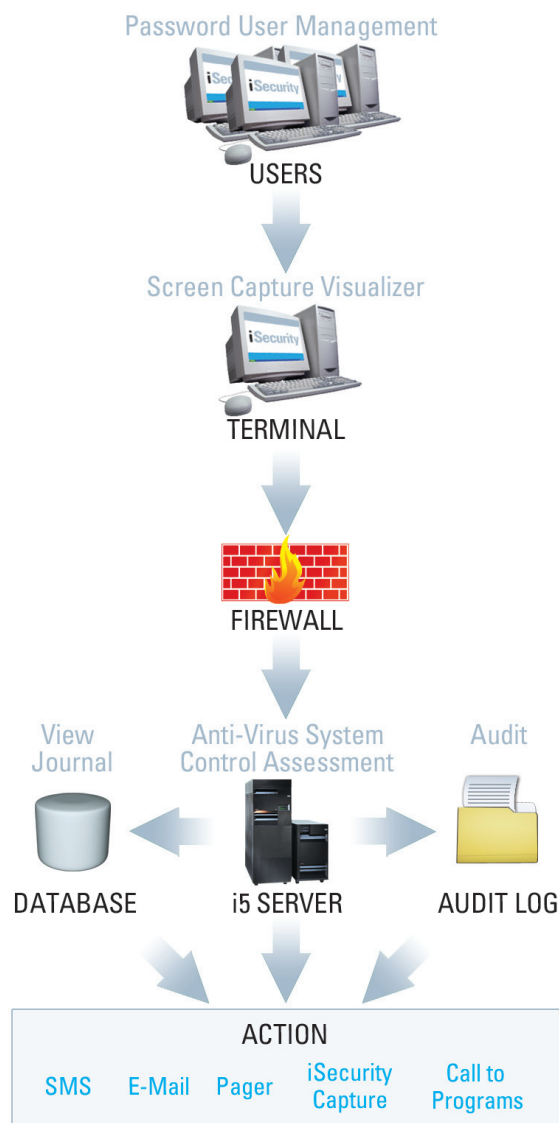

iSecurity consists of distinct modules to meet the full scope of System i security requirements. To relate more effectively to the specific needs of various customer and application segments, these modules have been grouped into suites.

The iSecurity suites are aimed at top-tier, corporate customers as well as small and medium sized enterprises. These "one price tag" suites assure customer specific ROI; no other product fits these requirements of the System i market pyramid.

iSecurity **Platinum** and **Gold** are uniquely tailored for enterprise and medium to large organizations requiring maximum protection for their System i computing environment.

iSecurity **Silver** is tailored for small businesses without an on-site system administrator. It gets them up and running quickly, with maximum security protection.

SYSTEM OVERVIEW

MODULE & DESCRIPTION

Assessment

Comprehensive analysis and reporting of server security status, pinpointing risks.

Firewall

IPS (Intrusion Prevention System). The only System i solution that covers 100% of all security-related exit points.

Screen

Session Time Out module for interactive projects (green screens).

System Control

Monitor System i environment - CPU, disk space, jobs, and message queues.

Audit

Presents all current System i activities and initiates responses to potential threats, in real-time, in a convenient, readable and simple format. Includes a powerful report generator with over 100 predefined reports.

View

Conceals sensitive record and field data from unauthorized users, without requiring any modifications to existing applications.

Action

Highly sophisticated IDS (Intrusion Detection System) module including warnings and automatic action triggers.

Anti-Virus

Real-time Anti-Virus module customized for System i.

Password

Prevention and reporting of password-related security issues.

Capture

Silently captures and documents user screens for tracking and surveillance, without affecting system performance. Can run in playback mode and can be used to search within texts.

Journal

Automatically helps manage database changes by documenting and reporting exceptions made to the database journal.

Visualizer

Business Intelligence module used for immediate graphic display analysis of data accumulated by iSecurity's Firewall and Audit modules.

FileScope

Provides a quick, efficient method for viewing, scanning, printing and changing the contents of records in all types of file formats.
